REPORT OF ANALYSIS

For: (27137) SEAAGRI SOLUTIONS LLC
Raw Mineral Sea Salts

Detailed Method Description(s)

Pesticides by GC/MS/MS

Submitted samples for pesticide detection are extracted by a QuEChERs method. A sample is made homogenous either through grinding, blending, or mixing. Approximately 3 g of sample is weighed into extraction tubes and 12 mL water, 10mL of acetonitrile and 2 mL of hexane are added. The salt packet provided with the extraction tubes is added and mixed, causing the acetonitrile to separate from the water. The acetonitrile extract is cleaned using dispersive solid phase extraction (dSPE). The extracts are combined with analyte protectants and are injected into a GC/MS/MS for separation and quantification.

Pesticides (LC/MS/MS) in pet foods with QuEChERS

Sample analysis follows MWL HPLC 045 which is based on AOAC 2007.01 (mod). Samples are prepared to obtain a homogeneous material and then pesticides are extracted using the QuEChERS procedure. The extract is then analyzed by LC/MS/MS with identification based on established pesticide libraries contained within the instrument.
