This report is to be reproduced in its entirety. All documents and data will be destroyed 7 years past invoice.
All samples will be disposed of 30 days past invoice unless prior arrangements have been made.
The results given in this report apply only to the sample(s) provided and as received.

Selected Metals by SFS-0116, Rev 14
Inductively Coupled Plasma-Mass Spectrometry

Sample preparation: A sample portion (0.2 g) was digested in a capped vessel with 1 mL of nitric acid and 3 mL of hydrochloric acid for 45 minutes on a block digestor set at 110°C. The sample was allowed to cool, and then 1 mL of 30% hydrogen peroxide was added. The capped digestion was then resumed for another 20 minutes. The digestate was cooled, internal standards were added, and then the digestate was diluted to a final mass of 100 g with high-purity water. The sample appears to have completely dissolved.

Parts Per Million (µg/g)

Sample ID	Arsenic	Cadmium	Lead	Mercury
Baja Gold Salt	ND	ND	0.05	ND
Detection Limit:	0.007	0.005	0.03	0.008

The work described above was conducted in compliance with the principles of current Good Manufacturing Practice. The results reported accurately reflect the raw data. The following compliance exception was noted: the results have been generated using method(s) that have not been validated at this facility.
